Pharmacotherapy of Depression-Domenic A. Ciraulo 2010-12-28 Comprehensive and state of the art, the second edition of Pharmacotherapy of Depression offers major revisions of every chapter and the addition of new chapters by expert contributors. The first chapter reviews the neurobiology of depression, which lays the groundwork for understanding the mechanisms of action of antidepressants. In the next chapter, a review of the general principles guiding the diagnosis and medication treatment of unipolar depression is provided. The clinical pharmacology of antidepressants is reviewed in some detail, supplemented by tables that provide information on dosing, indications, and metabolism. Augmentation strategies are reviewed, including the use of non-traditional agents. The chapters that follow next address the use of antidepressants in special populations, such as the elderly and depressed individuals with psychosis, bipolar disorder, substance abuse, and post traumatic stress disorder. The complex issues involving the diagnosis and treatment of depression during pregnancy is thoroughly reviewed in Chapter 8 and provides a synthesis of the scientific literature in the area, one that is noted for contradictory and controversial findings, as well as guidelines for prescribing. The next chapter then provides an overview of the treatment of depression in the pediatric population, highlighting clinical concerns such as suicide risk. The book concludes with two chapters at the interface of medicine and psychiatry in the treatment of mood disorders: managing depression in primary care settings and depression associated with medical illnesses. The outstanding clinician-scientists who have contributed to this volume are all leaders in their fields and represent a broad spectrum of renowned institutions. A timely contribution to the literature, The Pharmacotherapy of Depression, Second Edition, offers busy clinicians from many disciplines a strong scientific foundation that seamlessly transitions into practical recommendations for clinical practice. The result is another gold-standard guide to the safe and effective use of the latest antidepressant medications.

The Politics of Tourism in Asia-Linda K. Richter 2019-03-31 Tourism, the world's largest industry, has created a variety of complex political problems, particularly in those countries where the primary attraction of tourism is its potential for accelerating development. The political dimensions that have encouraged tourism in the People's Republic of China, the Philippines, Thailand, India, Pakistan, Bangladesh, Sri Lanka, the Maldives, Nepal, and Bhutan are examined in Linda K. Richter's study, which is based on more than 250 interviews with government officials, travel industry representatives, and media officials. Richter concentrates on the reasons for using tourism to advance government policy objectives and on the many ways political and economic problems can frustrate tourism's contribution to national development. All too often, after the expensive infrastructure is developed, luxury goods imported, and lavish promotional efforts expended, nations are left disillusioned with the economic promise of tourism. Disappointing results are often complicated by a preoccupation with the lure of tourism and an underestimation of the industry's needs and of the political pressures of and on government officials. Encouraging an awareness of the political aspects of tourism, the author advocates greater involvement by social and political scientists in monitoring tourism policy, as well as a restructuring and redesigning of programs in this largest sector of international trade.

Combustion Theory-Forman A. Williams 2018-03-05 Combustion Theory delves deeper into the science of combustion than most other texts and gives insight into combustions from a molecular and a continuum point of view. The book presents derivations of the basic equations of combustion theory and contains appendices on the background of subjects of thermodynamics, chemical kinetics, fluid dynamics, and transport processes. Diffusion flames, reactions in flows with negligible transport and the theory of pre-mixed flames are treated, as are detonation phenomena, the combustion of solid propellents, and ignition, extinction, and flammability phenomena.

Evidence-Based Geriatric Nursing Protocols for Best Practice, Fifth Edition-Marie Boltz, PhD, RN, GNP-BC, FGSA, FAAN 2016-03-28 This new edition of one of the premier references for geriatric nurses in hospital, long-term, and community settings delivers current guidelines, real-life case studies, and evidence-based protocols developed by master educators and practitioners. With a focus on improving quality of care, cost-effectiveness, and outcome, the fifth edition is updated to provide the most current information about care of common clinical conditions and issues in older patients. Several new expert contributors present current guidelines about hip fractures, frailty, perioperative and postoperative care, palliative care, and senior-friendly emergency departments. Additionally, chapters have been reorganized to enhance logical flow of content and easy information retrieval. Protocols, systematically tested by more than 300 participating NICHE (Nurses Improving Care for Health system Elders) hospitals, are organized in a consistent format and include an overview, evidence-based assessment and intervention strategies, and an illustrative case study with discussion. Additionally, protocols are embedded within chapter text, providing the context and detailed evidence for each. Chapter objectives, annotated references, and evidence ratings for each protocol are provided along with resources for additional study. New to the Fifth Edition: Reorganized to enhance logical flow of information and ease of use Updated and revised Includes new contributions from expert educators and practitioners Provides new chapters on perioperative and postoperative care, general surgical care, care of hip fracture, palliative care, and the senior-friendly emergency department Key Features: Includes PowerPoints and a test bank for instructors Delivers evidence-based, current guidelines and protocols for care of common clinical conditions in the older person Illustrates the application of clinical protocols to real-life practice through case studies and discussion Edited by nationally known geriatric leaders who are endorsed by the Hartford Institute for Geriatric Nursing and NICHE Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

Epigenetics, Environment, and Genes-Sun Woo Kang 2013-04-16 This title includes a number of Open Access chapters. Epigenetics refers to DNA and chromatin modifications that play an important role in the regulation of various genomic functions. This important book reviews human and cellular data that underline paradoxical findings with respect to the contribution of heredity and environment to phenotype. The contributors then reinterpret these experiments that incorporate epigenetic factors. Topics include DNA methylation, histone modifications, chromatin modifications, the role of epigenetic modifications and environment on gene expression, and integrating genomic medicine into clinical practice.

Organic Solar Cells-Barry P. Rand 2014-08-26 Organic photovoltaic (OPV) cells have the potential to make a significant contribution to the increasing energy needs of the future. In this book, 15 chapters written by selected experts explore the required characteristics of components present in an OPV device, such as transparent electrodes, electron- and hole-conducting layers, as well as electron donor and acceptor materials. Design, preparation, and evaluation of these materials targeting highest performance are discussed. This includes contributions on modeling down to the molecular level to device-level electrical and optical testing and modeling, as well as layer morphology control and characterization. The integration of the different components in device architectures suitable for mass production is described. Finally, the technical feasibility and economic viability of large-scale manufacturing using fast inexpensive roll-to-roll deposition technologies is assessed.

Natural Disasters and Climate Change-Stéphane Hallegatte 2014-09-17 This book explores economic concepts related to disaster losses, describes mechanisms that determine the economic consequences of a disaster, and reviews methodologies for making decisions regarding risk management and adaptation. The author addresses the need for better understanding of the consequences of disasters and reviews and analyzes three scientific debates on linkage between disaster risk management and adaptation to climate change. The first involves the existence and magnitude of long-term economic impact of natural disasters on development. The second is the disagreement over whether any development is the proper solution to high vulnerability to disaster risk. The third debate involves the difficulty of drawing connections between natural disasters and climate change and the challenge in managing them through an integrated strategy. The introduction describes economic views of disaster, including direct and indirect costs, output and welfare losses, and use of econometric tools to measure losses. The next section defines disaster risk, delineates between “good” and “bad” risk-taking, and discusses a pathway to balanced growth. A section entitled “Trends in Hazards and the Role of Climate Change” sets scenarios for climate change analysis, discusses statistical and physical models for downscaling global climate scenarios to extreme event scenarios, and considers how to consider extremes of hot and cold, storms, wind, drought and flood. Another section analyzes case studies on hurricanes and the US coastline; sea-level rises and storm surge in Copenhagen; and heavy precipitation in Mumbai. A section on Methodologies for disaster risk management includes a study on cost-benefit analysis of coastal protections in New Orleans, and one on early-warning systems in developing countries. The next section outlines decision-making in disaster risk management, including robust decision-making, No-regret and No-risk strategies; and strategies that reduce time horizons for decision-making. Among the conclusions is the assertion that risk management policies must recognize the benefits of risk-taking and avoid suppressing it entirely. The main message is that a combination of disaster-risk-reduction, resilience-building and adaptation policies can yield large potential gains and synergies.

Manufactured Carbon-R.R. Paxton 2018-01-18 This book discusses manufactured carbon for the purposes of being a self-lubricating material for mechanical devices. Topics include; properties and graphite crystals, properties of manufactured carbon, the manufacture of carbon articles, machining carbon, carbon in mechanical seals, carbon in bearings, rotary pumps and motors, metering devices, and piston rings and cylinder liners.

Depression-Thomas L. Schwartz 2006-03-27 Guiding clinicians toward the most effective treatment regimens, this reference offers detailed coverage of the symptomatology, diagnosis, epidemiology, and etiology of depression. A must-have tool for anyone prescribing psychotropics or performing psychotherapy, this source expertly reviews research and clinical data regarding acute and long-term

Modern Statistics for the Social and Behavioral Sciences-Rand Wilcox 2011-08-05 In addition to learning how to apply classic statistical methods, students need to understand when these methods perform well, and when and why they can be highly unsatisfactory. Modern Statistics for the Social and Behavioral Sciences illustrates how to use R to apply both standard and modern methods to correct known problems with classic techniques. Numerous illustrations provide a conceptual basis for understanding why practical problems with classic methods were missed for so many years, and why modern techniques have practical value. Designed for a two-semester, introductory course for graduate students in the social sciences, this text introduces three major advances in the field: Early studies seemed to suggest that normality can be assumed with relatively small sample sizes due to the central limit theorem. However, crucial issues were missed. Vastly improved methods are now available for dealing with non-normality. The impact of outliers and heavy-tailed distributions on power and our ability to obtain an accurate assessment of how groups differ and variables are related is a practical concern when using standard techniques, regardless of how large the sample size might be. Methods for dealing with this insight are described. The deleterious effects of heteroscedasticity on conventional ANOVA and regression methods are much more serious than once thought. Effective techniques for dealing heteroscedasticity are described and illustrated. Requiring no prior training in statistics, Modern Statistics for the Social and Behavioral Sciences provides a graduate-level introduction to basic, routinely used statistical techniques relevant to the social and behavioral sciences. It describes and illustrates methods developed during the last half century that deal with known problems associated with classic techniques. Espousing the view that no single method is always best, it imparts a general understanding of the relative merits of various techniques so that the choice of method can be made in an informed manner.

Deus Ex Machina and the Hands of the Beholder-Richard S. Bailey 2012-09-28 The Hollywood Drama-Logue raved about "Deus Ex Machina" saying, "The play is a delight, it wonderfully places in perspective the more commercial aspects of the business of belief. ...wonderful vaudeville schtick, outright camp, and a fine understanding of man. ...comic and somehow touching characters in difficult outrageous comedy sequences creating a feeling of real people caught in a surrealistic future space. ...wit, wisdom and downright fun. Bailey makes his point clearly." The San Francisco Bay Guardian called it "One of the best original plays of the year." when it was presented in Berkeley and at the Pacific School of Religion."Deus Ex Machina" and its prologue piece, "The Hands of the Beholder" are absurd, dark comedies about true believers, religious fundamentalists, and mystics who claim special knowledge of God. They take place in a rapidly approaching future when uncontrollable fervor is leading to a vaudevillian Armageddon. "Deus Ex Machina" is based on the biblical story of "Abraham and Issac". The nuclear family has split on how to find God and save the world. Father and son join on a rampage to unleash the power that is supposed to be contained in calling out the true name of God. The wife and mother warns of the impending disaster that will be the result of their quest. Ignoring her, they rush headlong through a hilarious melee of mystical, religious, and scientific information as they seek to recreate the days when the money flowed and God smiled upon them."The Hands of the Beholder" sets the stage for the end of the world when anarchist historians urge that each and every person remain vigilant and become aggressively active in choosing the tools to use in creating history they way they think it should be. Together, they describe a time that has become increasing real and menacing, leaving us only with the ability to tell a few jokes and laugh as the world crumbles around us.

The Prokaryotes-Martin Dworkin 2006-12-13 With the launch of its first electronic edition, The Prokaryotes, the definitive reference on the biology of bacteria, enters an exciting new era of information delivery. Subscription-based access is available. The electronic version begins with an online implementation of the content found in the printed reference work, The Prokaryotes, Second Edition. The content is being fully updated over a five-year period until the work is completely revised. Thereafter, material will be continuously added to reflect developments in bacteriology. This online version features information retrieval functions and multimedia components.

Powering Autonomous Sensors-María Teresa Penella-López 2011-05-18 Autonomous sensors transmit data and power their electronics without using cables. They can be found in e.g. wireless sensor networks (WSNs) or remote acquisition systems. Although primary batteries provide a simple design for powering autonomous sensors, they present several limitations such as limited capacity and power density, and difficulty in predicting their condition and state of charge. An alternative is to extract energy from the ambient (energy harvesting). However, the reduced dimensions of most autonomous sensors lead to a low level of available power from the energy transducer. Thus, efficient methods and circuits to manage and gather the energy are a must. An integral approach for powering autonomous sensors by considering both primary batteries and energy harvesters is presented. Two rather different forms of energy harvesting are also dealt with: optical (or solar) and

radiofrequency (RF). Optical energy provides high energy density, especially outdoors, whereas RF remote powering is possibly the most feasible option for autonomous sensors embedded into the soil or within structures. Throughout different chapters, devices such as primary and secondary batteries, supercapacitors, and energy transducers are extensively reviewed. Then, circuits and methods found in the literature used to efficiently extract and gather the energy are presented. Finally, new proposals based on the authors' own research are analyzed and tested. Every chapter is written to be rather independent, with each incorporating the relevant literature references. Powering Autonomous Sensors is intended for a wide audience working on or interested in the powering of autonomous sensors. Researchers and engineers can find a broad introduction to basic topics in this interesting and emerging area as well as further insights on the topics of solar and RF harvesting and of circuits and methods to maximize the power extracted from energy transducers.

Geriatric Rehabilitation-K. Rao Poduri 2017-03-16 Geriatric Rehabilitation addresses the fact that this is an age in which individuals have increasing longevity, better health care, education and expectations of health care which present new, increasing and even radical challenges to health care providers. The care of our older patients in rehabilitation settings demands the broad understanding of the key differences in strategies to care for older adults. The combined skills embraced in rehabilitation and geriatrics are presenting unprecedented opportunities for both fields to make substantive and even ground-breaking improvements in the lives of millions of older adults who entrust their lives to us. Rarely in one's medical career are such opportunities so evident and achievable. Geriatric Rehabilitation edited by Dr. K. Rao Poduri, MD. FAAPMR draws on a distinguished group of authors who are the front-line providers of care to the older adults. This book presents the full spectrum of the unique care needs of older patients who need the combined skills of physical medicine and geriatrics. It provides an easily accessible means of acquiring and improving these new skills for all those involved in geriatric care.
